

MARBLELAND / BUSINESS OPERATING SYSTEM

Infrastructure for intelligent digital markets.

Seven specialist systems. One evidence-driven operating loop.
Built to connect venture execution with financial-market intelligence.

07

SPECIALIST SYSTEMS

05

BUSINESS STAGES

02

LAUNCH RAILS

01

OPERATING LOOP

01 / INVESTMENT THESIS

One operating layer. Multiple financial workflows.

A product-first platform thesis, with Agent Intelligence and EventCap as initial commercial priorities.

01

CONNECTED LIFECYCLE

Venture creation, media, distribution and market activation share structured context.

02

FINANCIAL INTELLIGENCE

Evidence-oriented analytics spans crypto, tokenized equities and event-linked markets.

03

RECURRING ECONOMICS

The plan prioritizes SaaS, premium intelligence and B2B data access over token speculation.

PRODUCT REVENUE FIRST / NETWORK TOKEN CONDITIONAL

02 / PROBLEM

The lifecycle is continuous. The tools are not.

Execution becomes fragmented when data, creative workflows, launch operations and market feedback sit in disconnected products.

Market evidence rarely returns to the next venture decision.

One evidence-driven operating loop.

Six operating steps connect seven specialist systems without forcing every product into one monolithic application.

← EVIDENCE RETURNS TO THE NEXT DECISION

Start with intelligence. Expand through the network.

Commercialization priority: decision-ready information for digital-asset market participants.

FOCUS PRODUCT 01

Agent Intelligence

Market structure and trading intelligence across crypto spot, perpetuals and tokenized equities. Product direction: identifiable sources, data freshness, execution context and risk views.

FOCUS PRODUCT 02

EventCap

Prediction-market and cross-market intelligence built around market observations, comparable contracts, price gaps and resolution context.

SUBSCRIPTIONS

PREMIUM ANALYTICS

ENTERPRISE / API

05 / PRODUCT ARCHITECTURE

Seven specialist systems. Five business stages.

Each system owns a distinct workflow; evidence and structured handoffs connect the lifecycle.

01 / BUILD

VencOS

Venture architecture

02 / CREATE

Marble Studio

Media production

03 / DISTRIBUTE

KOLdex

Creator distribution

04 / LAUNCH

Solcast

Prediction markets

LaunchOS

Token / DEX workflows

05 / INTELLIGENCE

Agent Intelligence

Trading intelligence

EventCap

Event-market intelligence

ARCHITECTURE: MODULAR PRODUCTS / SHARED CONTEXT / EVIDENCE LINEAGE

06 / TARGET CUSTOMER

Three buyer jobs. A unified intelligence thesis.

A planned go-to-market that starts narrow, validates willingness to pay and expands to institutional partners.

01 / TRADERS & ANALYSTS

Understand markets

Premium dashboards, alerts and comparative context for crypto and tokenized assets.

02 / WEB3 TEAMS

Run better launches

Market monitoring, distribution evidence and launch-related analytics.

03 / DATA PARTNERS

Integrate intelligence

API-oriented data products and selected B2B intelligence workflows.

COMMERCIAL PLAN: QUALIFIED PILOTS → PAID ACCESS → RECURRING REVENUE

07 / BUSINESS MODEL

Recurring revenue first. Token economics later.

Revenue lines are proposed monetization routes; they are not presented as current audited sales.

01 / PREMIUM SUBSCRIPTIONS

Advanced market intelligence, analytical workspaces and alerts.

02 / ENTERPRISE / API

Programmatic data access, tailored dashboards and partner integrations.

03 / LAUNCH INFRASTRUCTURE

Workflow tools and potential service fees for market activation.

04 / MEDIA & DISTRIBUTION

Creative production usage and campaign coordination services.

08 / DESIGN COMMITMENTS

Trust is a product architecture choice.

The whitepaper defines four constraints for product, data, token and operational design.

01

PRODUCT BEFORE TOKEN

Core services must be useful without requiring token-price appreciation.

02

EVIDENCE BEFORE CLAIMS

Observed data, calculations and model outputs remain distinctly labeled.

03

UTILITY BEFORE EMISSIONS

Network rewards depend on measurable contributions, not activity alone.

04

CONTROL BEFORE SCALE

Token, treasury, launch and governance mechanisms require safeguards.

Product surfaces today. Commercial proof next.

The operating footprint is documented publicly. Paid traction and retention are not represented as verified results in this deck.

NEXT VALIDATION MILESTONES

- Paid customer pilots
- Subscription conversion
- Retention and product usage
- Reliable data and API coverage

NOTE / LAUNCHOS: INTEGRATED LAUNCH RAIL

10 / EXECUTION PLAN

A disciplined path to commercialization.

Proposed priorities for the first 12 months following financing. Timing is indicative and contingent on execution.

0-3 MONTHS

FOUNDATION

Harden priority products and source reliability. Define pricing, onboarding and measurable success criteria.

3-6 MONTHS

VALIDATION

Recruit qualified pilot customers. Test premium workflows, willingness to pay and product usage.

6-12 MONTHS

EXPANSION

Convert validated use cases to recurring subscriptions. Pursue data and enterprise distribution partnerships.

OPERATING KPIS: RELIABILITY / ACTIVE PILOTS / PAID CONVERSION / RECURRING REVENUE

Lean by design. Built for focused execution.

Marbleland Labs LLC is a Wyoming-registered U.S. company with a two-person core team.

BUSINESS LEADERSHIP

Chief Executive Officer

Jaian Cuttari

Company strategy, fundraising and commercial partnerships.

TECHNICAL DEVELOPMENT

Co-Founder & Developer

Jason Martin

Product engineering and technical implementation.

Hands-on product development and technical execution.

TWO-PERSON CORE TEAM / FOCUSED PRODUCT DEVELOPMENT & COMMERCIAL STRATEGY

\$400,000 strategic pre-seed investment.

Capital is proposed for commercialization and validated distribution, not for a speculative token listing.

FUNDING REQUEST

\$400K

\$4M indicative pre-money
Subject to investment structure & diligence

PROPOSED ALLOCATION

- PRODUCT COMMERCIALIZATION 40%
- MARKET DATA & INTEGRATIONS 30%
- DISTRIBUTION & BD 20%
- SECURITY, LEGAL & OPS 10%

STRATEGIC PARTNERSHIP THESIS

Let's build the
market intelligence
layer together.

Beyond capital: potential collaboration in market data, tokenized-asset intelligence, enterprise distribution and exchange-adjacent infrastructure.

INVESTMENT REQUEST

\$400K PRE-SEED
